

Green Careers Week 4th – 8th November

This week we are celebrating Green Careers Week to provide students with insight into careers that protect the environment.

Tackling climate change is a global effort. In 2019, the UK pledged to reach Net Zero by 2050 and choosing a sustainable career is a great way to build a greener world. There are many different types of green careers

- Careers that develop solutions to environmental challenges.
- Careers involved in making industries and the planet more sustainable.
- Careers directly linked to reducing and where possible avoiding damage to planet resources.

Our students have been discovering a range of green careers in form time, for example renewable energy specialist, urban planner and eco-friendly fashion designer.

A green career can be any job, role or occupation that contributes to preserving or restoring the environment and our planet. It can be any industry, not just those seen as green, for example, Plumbers can instal low flow fixtures and water efficient appliances, Software Engineers develop green technologies and software solutions for climate change and Chefs source local, organic ingredients and minimise food waste.

We are passionate about inspiring our students to consider careers that make a lasting difference for the environment and for society.
